

Aetna Better Health[®] of Kansas

We're with you: Provider Partnerships

Aetna Better Health of Kansas is committed to developing positive, long-term relationships with the members, providers, and communities we serve. We're focused on member outcomes, and quality. Think of us as an extension of your team — joining forces to provide comprehensive, coordinated health care resources, services, and support.

We are initiating a Psychotropic Polypharmacy review for our members to improve health and reduce potential harm. This initiative will start with the Foster Care population and expand to all members.

The Aetna Polypharmacy Initiative incorporates the following components:

- Identification of at-risk enrollees through an internal polypharmacy report
- A thorough care management approach for identified enrollees that includes medication review, comprehensive assessments, referrals with a warm hand off when needed to appropriate resources, and collaborative care planning
- Internal polypharmacy rounds with Care Management, Pharmacy, Medical Directors, Quality and Utilization Management, and state partners in attendance to discuss individual members and provide collaborative recommendations to resolve medication-related concerns when possible
- Referrals to Clinical Pharmacy Advisor (CPA) for consultation as part of Pharmacy Medication Management Program (PMMP)
- Provider and enrollee/family education regarding polypharmacy
- 90-day and 180-day polypharmacy case reviews that are conducted internally to evaluate outcomes of initial rounds and consults recommendations and determine next steps
- Analysis of trends and quality improvement efforts
